Rick Shepherd, Macmillan Iberia

Bringing the students of today the technology of tomorrow.
Introducing Macmillan New Ventures.

Personal

- PrepU es una motor de autoevaluación que proporciona un puente entre lo que los alumnos saben y lo que no saben.
- PrepU centra el tiempo de estudio con cuestionarios personalizados y adaptivos en donde los estudiantes se progresan hacia una mejor comprensión de la materia y mejores calificaciones.
- Los usuarios pueden comparar sus puntuaciones individuales y en general a las de los usuarios que están utilizando PrepU para el mismo curso en todo el país.

Adaptivo

- **Constructor personalizado de Quizzes**

PrepU ayuda a averiguar lo que no sabes. Se llama "interrogación adaptiva personal", lo cual significa que experiencia única es exactamente lo que necesitas para entender los conceptos básicos y obtener mejores calificaciones.

- A medida que tomas exámenes en PrepU, el sistema determina rápidamente tu nivel de conocimientos y te proporciona las preguntas adecuadas-ni demasiado fácil (aburrido) ni demasiado duro (intimidación).

- **Informes personalizados**

Con los informes personalizados PrepU se convierte en una guía de estudio online dinámico! Se proporciona información sobre tu rendimiento desglosados por tema, para que sepaa exactamente dónde enfocar tus esfuerzos de estudio.

- **Clave de respuestas**

PrepU ofrece una clave de respuestas para cada cuestionario completado, una forma rápida de revisar las preguntas y temas específicos.

Fiable

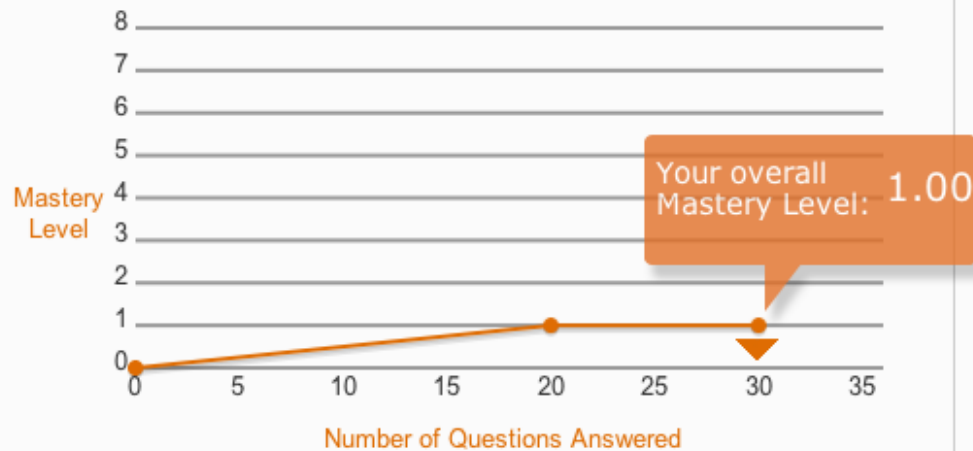

- **Miles de preguntas que se evaluadas en clase.**
Cada pregunta en PrepU es de clase probada y analizada por la calidad.
- **Calificaciones de dificultad de preguntas basada en datos.**
Los niveles de dificultad no se asignan arbitrariamente, sino que se basan en datos de estudiantes reales.
- **Malentendidos de los estudiantes claramente identificados.**
El 'Alerta de Malentendido' de PrepU no solo identifica las preguntas que has contestado correctamente, sino que también identifica las preguntas donde la mayoría de los estudiantes han elegido la misma respuesta equivocada. Preguntas identificados con una Alerta de Malentendido ofrecen grandes momentos de enseñanza
- **Centro de asignación flexible y fácil de usar.**
PrepU hace que sea fácil de construir pruebas y exámenes usando un depósito de miles de preguntas.

 - red flag icons indicate weaknesses

What information can I gain from these graphs?

The "How Am I Doing?" dashboard shows your overall progress, and your understanding of each chapter. Use this information to focus study time on weak areas, compare your mastery to that of your classmates, and enjoy the progress you've made. For an animated tour of the "How Am I Doing?" page, [click here](#).

Mastery is not the same as a grade.

PrepU's eight mastery levels reflect your grasp of key topics in your PrepU course. The mastery levels were created based on data from tens of thousands of students nationwide. Your mastery level is based on quiz performance and question difficulty. Questions become more difficult as you advance through the levels.

Sapling Learning's user interface is simple and clear, so students can focus on solving problems rather than struggling with the system.

The screenshot displays the Sapling Learning interface for a chemistry problem. At the top, there are links for 'Print', 'Calculator', and 'Periodic Table'. The problem is labeled 'Question 5 of 5'. The problem text states: 'A 0.08410 g sample of gas occupies 10.0-mL at 293.0 K and 1.10 atm. Upon further analysis, the compound is found to be 13.068% C and 86.932% Br. What is the molecular formula of the compound?'. Below this is a text input field. The next part of the problem asks to 'Draw the Lewis structure of the compound.' with a 10x10 grid provided. To the right, it asks to 'Identify the geometry around each carbon atom.' with a list of options: 'trigonal pyramidal', 'tetrahedral', 'trigonal planar', and 'linear'. The final part asks 'Is this compound polar?' with two radio button options: 'The compound is polar.' and 'The compound is nonpolar.'. At the bottom, there are navigation buttons: 'Hint', 'Previous', 'Give Up & View Solution', 'Check Answer', 'Next', and 'Exit'.

Question 5 of 5

A 0.08410 g sample of gas occupies 10.0-mL at 293.0 K and 1.10 atm. Upon further analysis, the compound is found to be 13.068% C and 86.932% Br.

What is the molecular formula of the compound?

Draw the Lewis structure of the compound.

Identify the geometry around each carbon atom.

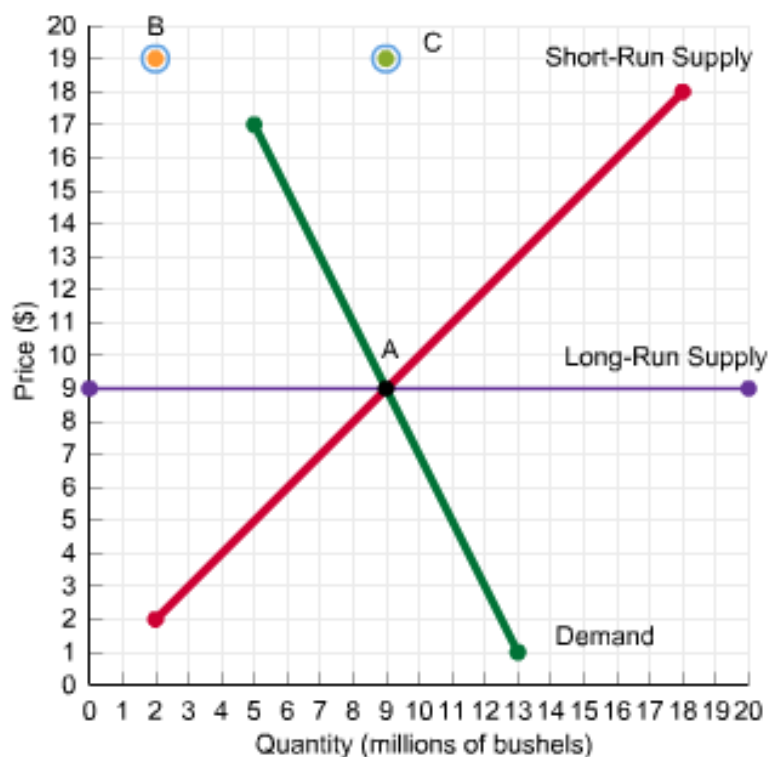

Is this compound polar?

Navigation: Hint, Previous, Give Up & View Solution, Check Answer, Next, Exit

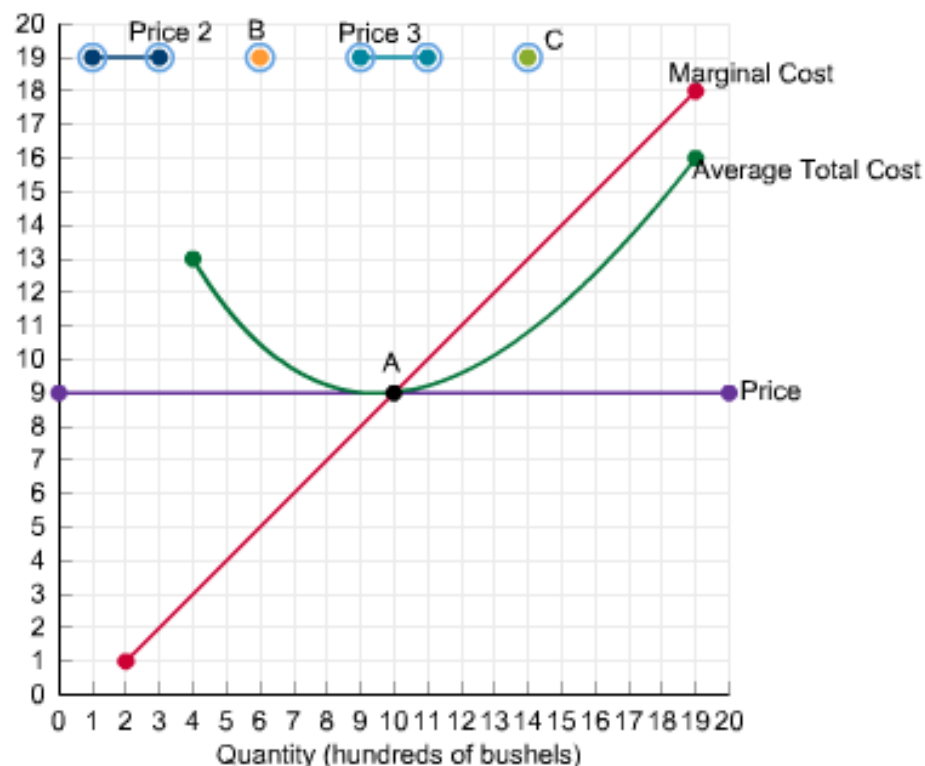

Sapling Learning maximizes student engagement and comprehension by delivering immediate feedback. Students receive instructional content targeted to their responses as they work the problem.

On the left is a graph of the market for soy beans, a perfectly (purely) competitive market. On the right is a graph of Roy's Soys, an individual firm in the market for soy beans. The market and the firm are currently in long-run equilibrium at point A. Scroll down for all of the instructions.

Soy Bean Market

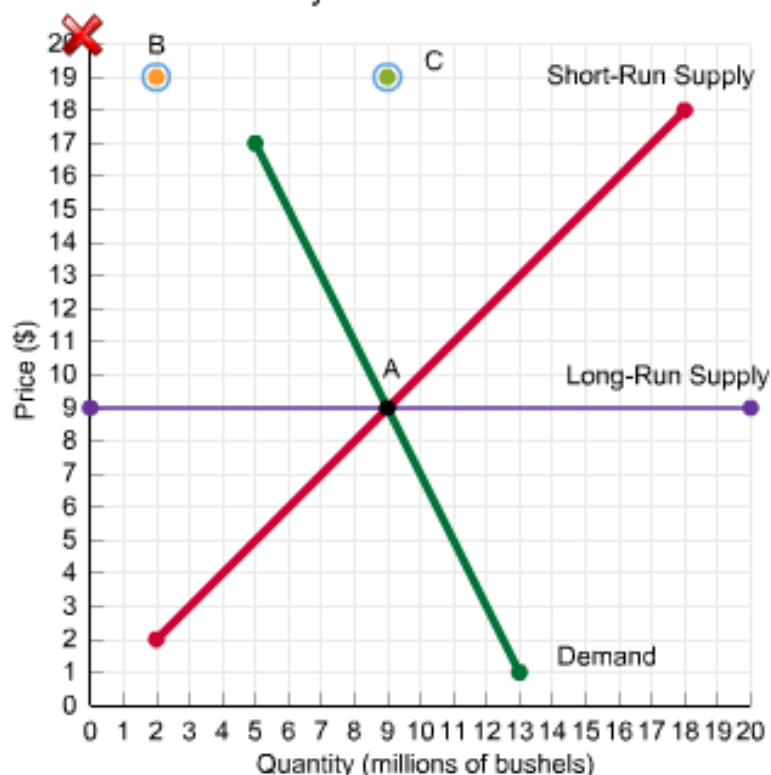

Roy's Soys

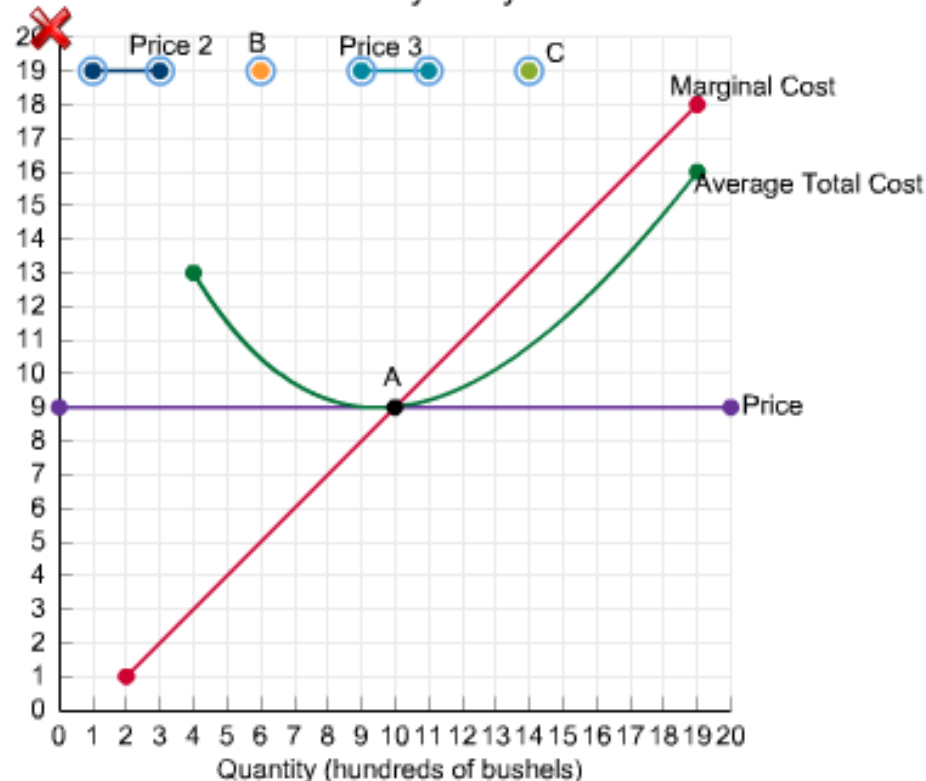

Show what happens in the short run on both graphs when a new

equilibrium at point A. Scroll down for all of the instructions.

Soy Bean Market

Roy's Soys

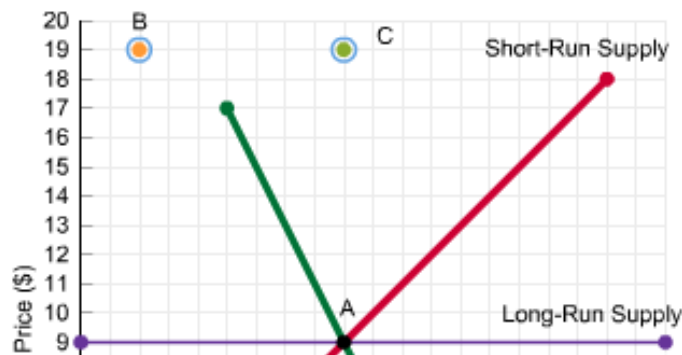

Show what happens in the short run on both graphs when a new medical study shows soy beans to be an effective weight-loss supplement. On the market graph, shift the curve labeled "Short-Run Supply," "Demand," or both curves. On the firm's graph, use the line labeled "Price 2" to draw a new price line for the firm. On both graphs, indicate the new equilibrium points with the orange point B.

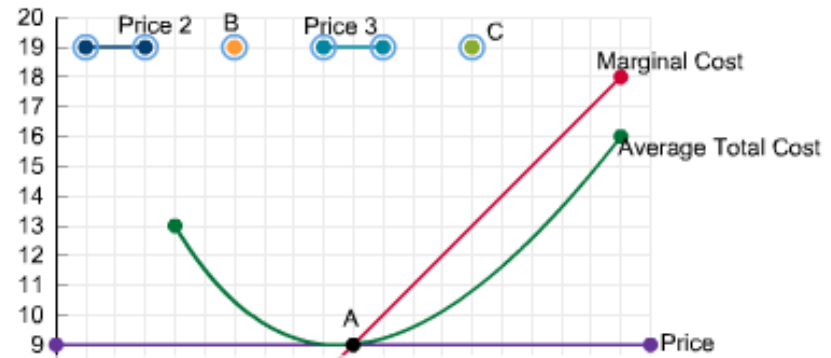

Incorrect. You did not change the market graph correctly. Does the new medical information influence consumers or producers? Would it make them want to eat more soy beans, or fewer?

On the left is a graph of the market for soy beans, a perfectly (purely) competitive market. On the right is a graph of Roy's Soys, an individual firm in the market for soy beans. The market and the firm are currently in long-run equilibrium at point A. Scroll down for all of the instructions.

Soy Bean Market

Roy's Soys

▼ Hint

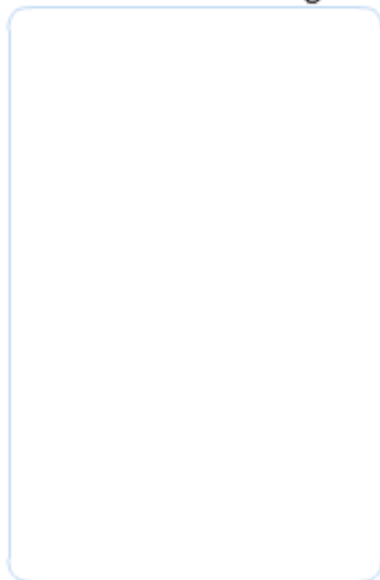

Previous Give Up & View Solution Check Answer Next Exit

When normal market forces change Demand in a perfectly competitive market, the firms will sell at the new market price.

But in the long run, these markets will return to long-run equilibrium.

Sounds coming from moving objects, such as the siren of an emergency vehicle, appear to change pitch as the object moves toward or away from you. Compare the wavelength of a siren based on its motion toward or away from you.

Shortest wavelength

Longest wavelength

**Note: mph = miles per hour

neither toward nor
away from you

toward you
at 3 mph

toward you
at 32 mph

toward you
at 41 mph

away from
you at 32 mph

away from
you 31 mph

Sounds coming from moving objects, such as the siren of an emergency vehicle, appear to change pitch as the object moves toward or away from you. Compare the wavelength of a siren based on its motion toward or away from you.

Shortest wavelength

neither toward nor
away from you

toward you
at 41 mph

away from
you at 32 mph

toward you
at 32 mph

away from
you 31 mph

toward you
at 3 mph

Longest wavelength

**Note: mph = miles per hour

Sounds coming from moving objects, such as the siren of an emergency vehicle, appear to change pitch as the object moves toward or away from you. Compare the frequency of a siren based on its motion toward or away from you.

Highest frequency

neither toward nor
away from you

toward you
at 49 mph

toward you
at 34 mph

away from
you at 34 mph

away from
you 13 mph

toward you
at 4 mph

Lowest frequency

Incorrect.

Did you rank according to speed only? The direction of the motion, either toward you or away from you, also needs to be considered when ranking.

**Note: mph = miles per hour

Sounds coming from moving objects, such as the siren of an emergency vehicle, appear to change pitch as the object moves toward or away from you. Compare the frequency of a siren based on its motion toward or away from you.

Highest frequency

neither toward nor
away from you

away from
you at 34 mph

toward you
at 4 mph

toward you
at 34 mph

toward you
at 49 mph

away from
you 13 mph

Lowest frequency

Incorrect.

The item "neither moving toward nor away from you" is not the highest frequency.

The frequency changes with respect to the frequency at rest, becoming either higher or lower depending on whether it is moving toward or away from you.

**Note: mph = miles per hour

Sapling Learning's visually rich problems challenge students at every level, allowing them to be actively involved in the learning process.

Tutorials are offered throughout to allow students to work step-by-step through complex questions, enhancing their problem-solving learning experience.

Late Nite **LABS**

Lab Manual

Background

Procedures

Lab Notes

Print

Experiment 1: Decomposition

1. Take a new clean crucible from the Containers shelf and place it on the workbench.
2. Add 5 g of copper(II) carbonate hydroxide hydrate ($\text{Cu}_2\text{CO}_3(\text{OH})_2 \cdot \text{H}_2\text{O}$) from the Materials shelf to the crucible.
3. Take out a balance from the Instruments shelf and then weigh the crucible. Record the total mass of the crucible and its contents in your Lab Notes.
4. Take out a Bunsen burner from the Instruments shelf and place the crucible on it.
5. Double-click the crucible to open its Item Properties. Check the option to **Show Contents** and click **OK** to give you a cut-away view of the crucible's contents.
